

Letter from Berlyn's mother, Tech Trek 2022

Hi, my daughter Berlyn just finished her week of tech trek camp. She chose her classes and picked her core class as structural engineering, she also took other courses such as chemistry, coding, dna extraction, flip grid, nextEra energy, and search engine algorithms.

She got to build a house out of spaghetti noodles and marshmallows, towers out of balsa wood that had to withstand at least ten pounds of rice being placed on top. She made a lava lamp, A solar powered windmill, and my personal favorite...a dna

necklace.... 

My daughter Aspyn was also blessed to be able to attend this camp last summer and loved it. She chose her core class as marine biology and chose her extra classes chemistry, graphic design, computer animation, bullet journaling, and manatee preservation.

I just wanted to send this message to thank you for sponsoring them. I can't express enough how great this camp is. They do and learn so very much and I am so appreciative of them being honored with being able to both attend.
